COLLABORATIVE PLANNING THAT JUST WORKS

In today's competitive construction environment, schedules matter. And planning matters even more. Ensuring that your entire project team is effectively communicating and staying on the same page requires constant vigilance and management. With compressed schedules, and full flexibility, project planning is effectively the one element in the construction process where the rubber meets the road.

A BETTER WAY TO PLAN AND EXECUTE

In recent years, contractors have begun to implement numerous concepts within the look ahead and planning process to achieve greater execution on their projects. Largely based around the Lean concept and framework, these processes integrate pull-planning and effective communication and task ownership, making sure that everyone on the project team is up to date on all parts of the job.

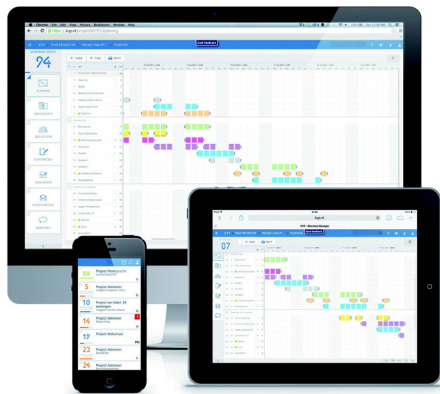

Trimble Leansight embraces the best of these concepts, and adds seamless and intuitive collaborative features, digitizing the sticky notes and creating a single platform to ensure every trade and stakeholder has access to the same information, which fosters buy-in and drives project success.

POWER IN SIMPLICITY

Based on the concept of simplicity and usability, Trimble Leansight prioritized ease-of-use and an intuitive experience that is easily familiar to both office and field users, reducing the learning curve and allowing users to get up and running in minutes, rather than days. And because Leansight is multiplatform, you can leverage any device that suits your workflow, either in a traditional browser environment, tablet, or mobile phone.

With Trimble Leansight, *the power to plan is in your hands.*

GETTING STARTED COULDN'T BE EASIER

It's easy to hit the ground running with Trimble Leansight, and completely free to explore. Simply head over to www.leansight.trimble.com to begin creating your project plan today, or just reach out to your BuildingPoint representative.
